

Resetting Errors on the PlateWriter 2400

When plotter is turned OFF - press and hold the **Down**, **Right**, and **Enter** (CENTER) buttons and turn on the Printer.

Release the **Down**, **Right**, and **Enter** (CENTER) buttons when you can see on display "**SELF TESTING MODE**".

press **UP ARROW** 2 times until you see *Parameter*

Press **RIGHT ARROW** 2 times for *Initialize / All*

Press **UP ARROW** 1 time for *Initialize Cleaner Record*

Press the **CENTER** 2 times, it will say initialize/ OK?

Turn printer off and then back on

Other way:

1. When plotter is turned OFF - press and hold down the **Paper Source** button + **Cut Eject** button + 1 **Paper Feed** button (Down arrow)
2. **POWER ON**, whilst holding the buttons.
3. **View Counters** should appear on the display, so press **Paper Feed** button down until **Clear Counters** is displayed.
4. Press **Select Type** button + **Paper Feed** button + wait until **Cleaner** is displayed.
5. Press **ENTER** button TWICE
6. Switch printer OFF, then ON.

The error display should then have disappeared, and should read READY

IMPORTANT

This process can ONLY be followed ONCE before an engineer is required
